Ingredient Spotlight – Serious Protection

Serious Protection: We all need protection from the damaging rays of the sun, especially during the warm spring and summer months. Most sunscreens on the market only provide protection against UVB light, which causes surface sunburn. However, experts now know that UVA light penetrates through the skin, causing deeper connective tissue damage while promoting premature aging.

FUN FACT: The best insurance policy you can purchase for your skin is a PROPER SUNSCREEN!!

Serious Protection is a high quality sun block which can be used on the face and body. Not only is it a full spectrum block, but it is also non-irritating and water-resistant. All skin types can benefit from this sun block.

Its active ingredients are:

Micronized Titanium Dioxide: The sun block mineral that is also anti-bacterial and provides anti-viral activity.

Micronized Zinc Oxide: Natural mineral sun block protects against both UVA and UVB rays.

Zirconium Oxide – a natural mineral sun block, protects against both UVA & UVB rays.

Serious Protection sun block is an excellent choice for your outdoor activities! (\$55 – 3.3oz)

Don't forget....if you are playing in the sun you must re-apply your sun block every 2-3 hours!!

GENERAL INFORMATION

We carry a complete line of CosMedix Skin Care. CosMedix is a chirally correct, natural, chemical-free line containing no parabens, no dyes, no chemical irritation – only high potency vitamins, minerals & antioxidants that change the physiology of the skin.

Skincare products are recommended to support our professional services at home.
